

NEW IN THE OCTOBER 2026 RELEASE

What's new in Onflo ITAM

Smarter asset relationships, easier location tracking and faster imports

★ FEATURED IN THIS RELEASE

Linked Assets (Carts & Containers)

Movable carts and containers with multiple IT assets can now be tracked and managed as one, with parent-child linkages. Your inventory stays accurate, assignments and moves need fewer manual clicks, audits go faster, and no device is left unaccounted for.

Move a cart, move associated devices

Reassigning a parent automatically updates all linked devices, ensuring precise location tracking with minimal manual work.

Audit-ready at a glance

See a parent, its children, and linked assets in one Related Assets tab to verify a full cart or container in seconds.

Accountability without busywork

Check devices out to students and back into their parent cart, so chain of custody stays intact.

Onboard carts in bulk

Link hundreds of assets from bulk edit and imports with existing relationships to set up carts in minutes, not days.

MORE IN THE OCTOBER 2026 RELEASE

Asset Fields Enhancements

Asset data you can trust

- › Model always matches its Manufacturer with a linked catalog
- › Unique, mandatory Asset IDs for barcodes & tags
- › See who had a device, and where, over time

Scheduled Asset Import

Set it once, stay in sync

- › Auto-sync from Cloud URL Sheets, OneDrive or SFTP
- › Runs on your schedule, or on demand
- › Always current, with full sync history

Container Import

Go live in hours

- › Bulk-import containers from CSV/XLSX
- › Wizard maps to your existing rooms
- › Pause & resume, with full visibility

IT Asset Management for K-12

The current release builds on rich existing capabilities provided by Onflo for IT Asset Management — a central repository for all IT hardware with an integrated service-desk experience for managing every district device from first setup to retirement.

EXISTING ITAM CAPABILITIES

Flexible Configuration & Role-Based Security

Configure Onflo to how you work, with simple access and airtight, role-scoped security.

Detailed Performance Analytics

Visibility into asset performance to optimize usage, fix issues faster, and maximize ROI.

Automated Asset Workflows

Automated rules handle the details, improving accuracy and compliance effortlessly.

Bulk Asset Operations

Import mass quantities and run automated bulk actions to fast-track updates.

Device Lifecycle Management

Track every device from setup to retirement with routing rules, alerts, and escalations.

Barcode & RFID Integration

Update info, track locations, and check inventory with barcode scanning and printing.

Real-time Inventory Tracking

Dashboards by location and user, with detailed views and automated low-inventory alerts.

Integrated into the K-12 Technology Ecosystem

Ready integration with Onflo ITSM, as well as common SIS and MDM systems that districts rely on.
